

Automatic Filling and Closing on a Tabletop

TurboFil's MiniMonoblock is a compact tabletop machine that automatically fills and caps or crimp closes small bottles or vials. It brings proven TurboFil technology to a new level with the most versatile machine available in this compact low profile format. Sophisticated, yet surprisingly clean and easy to operate, it avoids the need to move bottles between machines with conveyors.

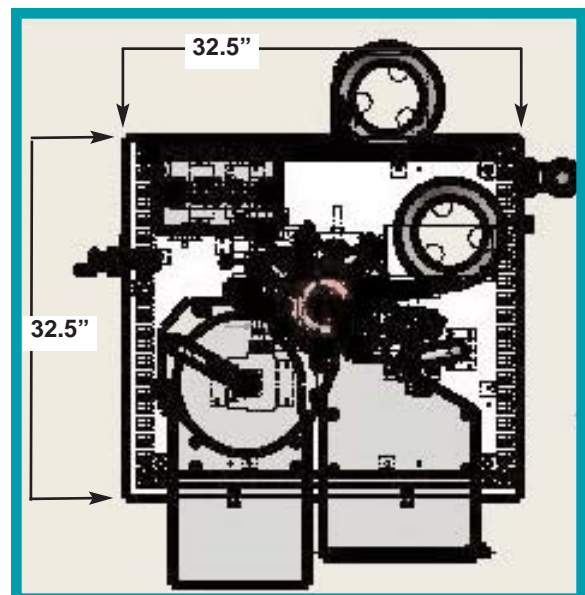

TurboFil's Proven Technology in a Smaller Package

TurboFil's MiniMonoblock can be fitted with a variety of filling technologies to suit almost any small bottle or vial application. The bottles or vials are loaded into the infeed tray by the operator, automatically filled and closed by the machine and then discharged into an output tray for further processing. The machine is PLC controlled with no bottle...no fill, and no fill... no cap protection.

Features of TurboFil's MiniMonoblock

- Container types: glass or plastic bottles or vials
- Closure types: caps or crimp tops
- Speeds range: 15-40 per minute
- Cam driven fill station, option for servo driven
- Filling options include piston, peristaltic, etc.
