TURBOFIL INTRODUCES DUAL CHAMBER CARTRIDGE FILLER AT EASTPACK

JUN 13, 2005, NEW YORK, NY – TurboFil Packaging Machines, LLC is pleased to announce the introduction of a major new filling and assembly monoblock. The company will show the **DUAL CHAMBER CARTRIDGE FILLER** at the EastPack show located at the Javits Center in New York City. This machine fills a dual component epoxy silicon based dental impression material. The cartridges are filled by a specially designed product delivery system – volumetric piston pump with positive shut off nozzle – to eliminate dripping or stringing of the product. Closure of the cartridge is accomplished by inserting a piston while using a vacuum chamber to evacuate the air that has been trapped above the liquid. The system is a single chassis monoblock design with a small footprint that will fit into almost facility. This machine can also be adapted for filling of a variety of high viscosity problematic products, such as epoxies, caulking materials, surgical glues, and a variety of dental products.

TurboFil Packaging Machines, LLC (www.turbofil.com) is a privately held manufacturer of liquid filling and assembly machines. The company produces products including indexing monoblocks, benchtop fillers, crimpers and cappers for the pharmaceutical, cosmetic and chemical industries.
